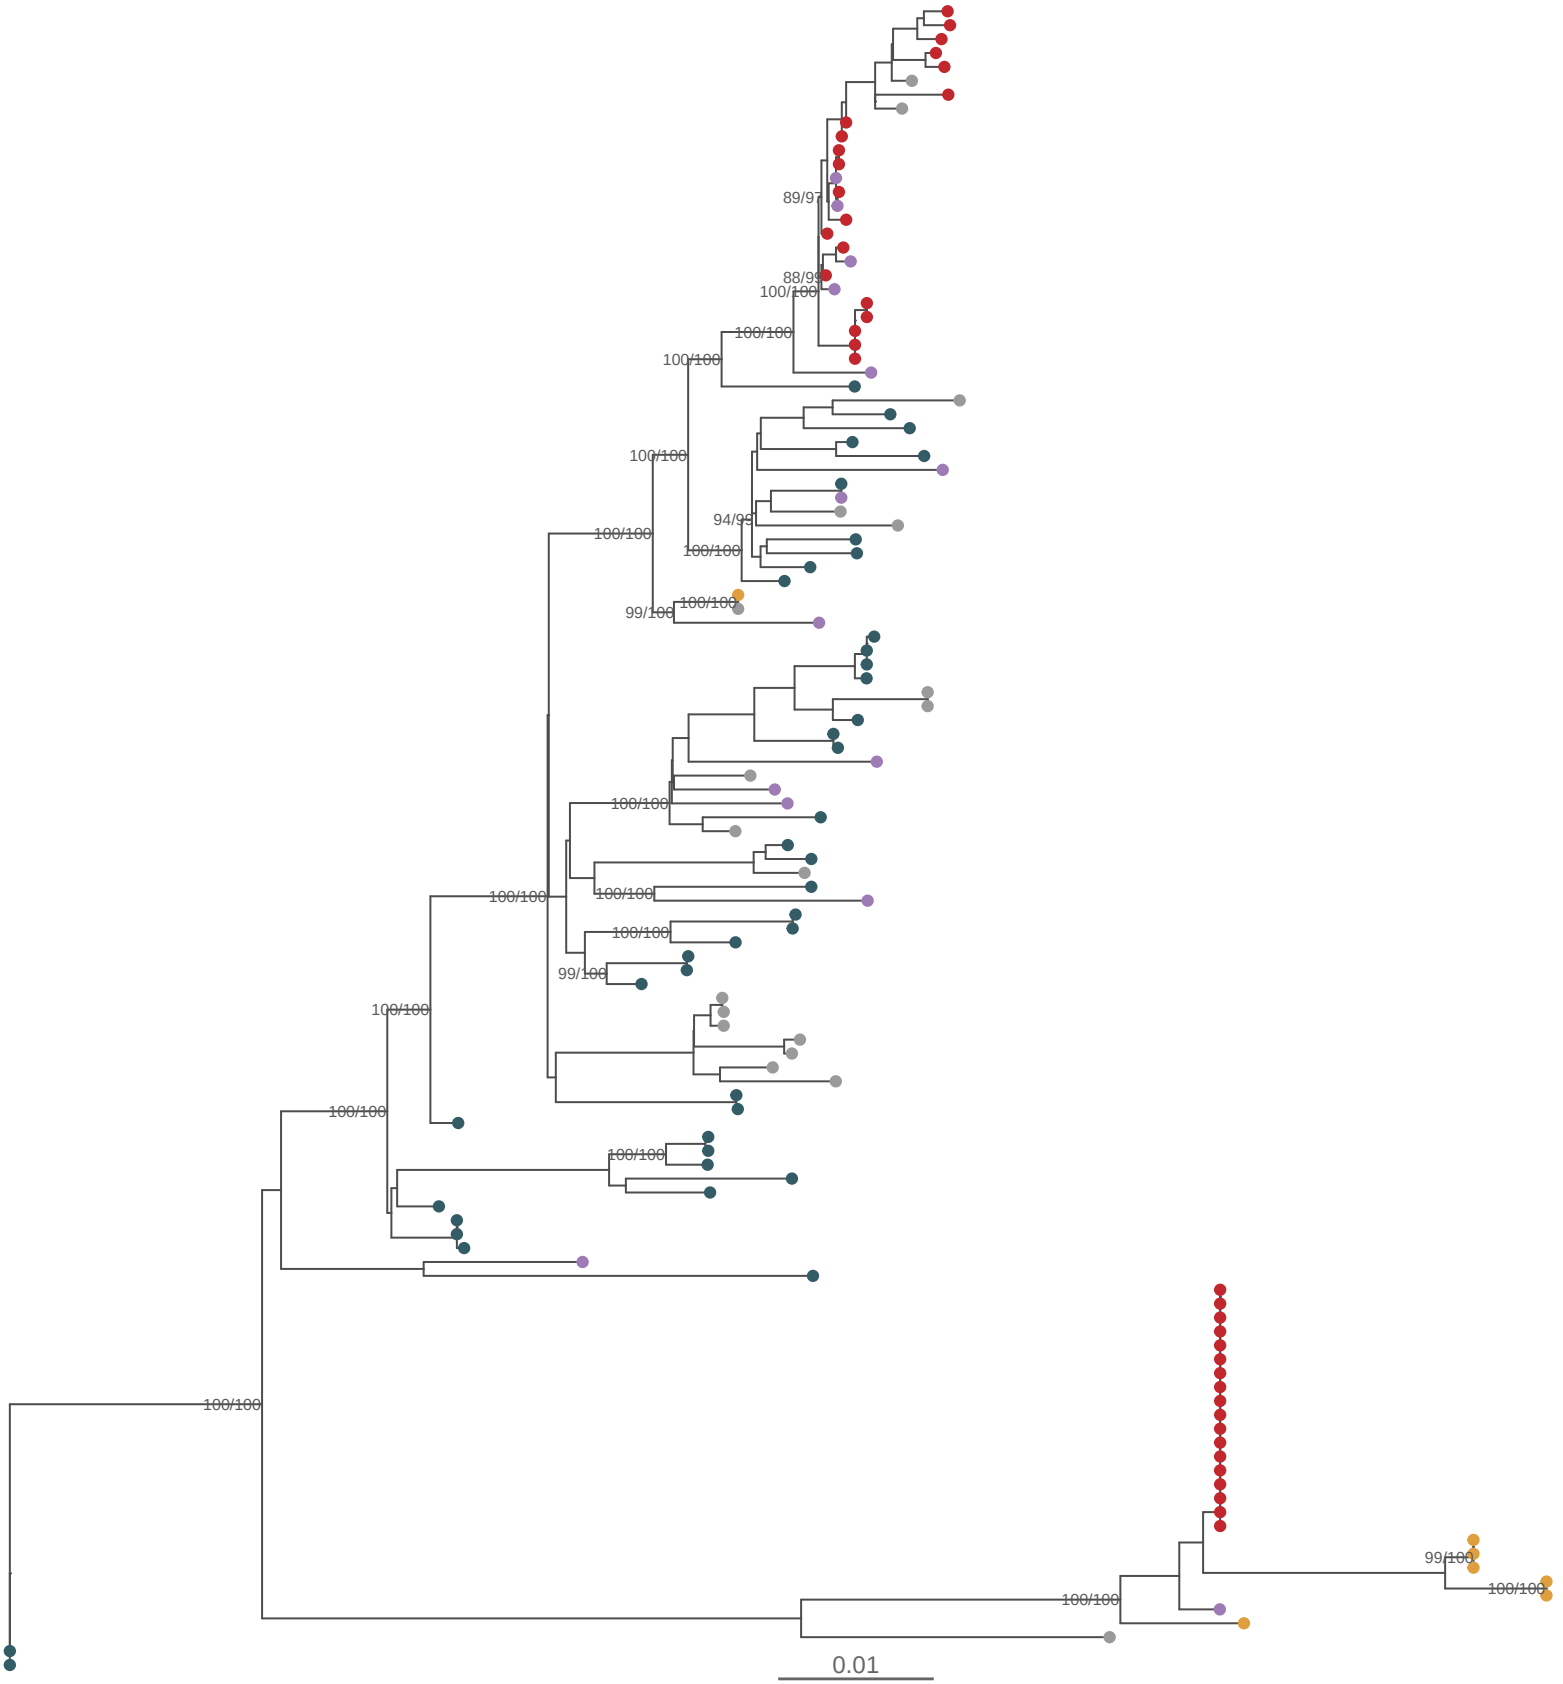
Whole−genome maximum−likelihood tree

DENV−3 genotype I, plus the 2021 Bangladeshi genotype III (3III_A) detection and a 3II_B outgroup. Tip colour = where the sequence was collected. Labels show SH−aLRT / ultrafast bootstrap, on well−supported branches only (>=80 and >=95).



IQ−TREE 3.1.4, model GTR+F+I+G4, 1000 ultrafast bootstrap and 1000 SH−aLRT replicates. Rooted by molecular clock: lineage 3I is a paraphyletic parent label and cannot serve as an outgroup.
