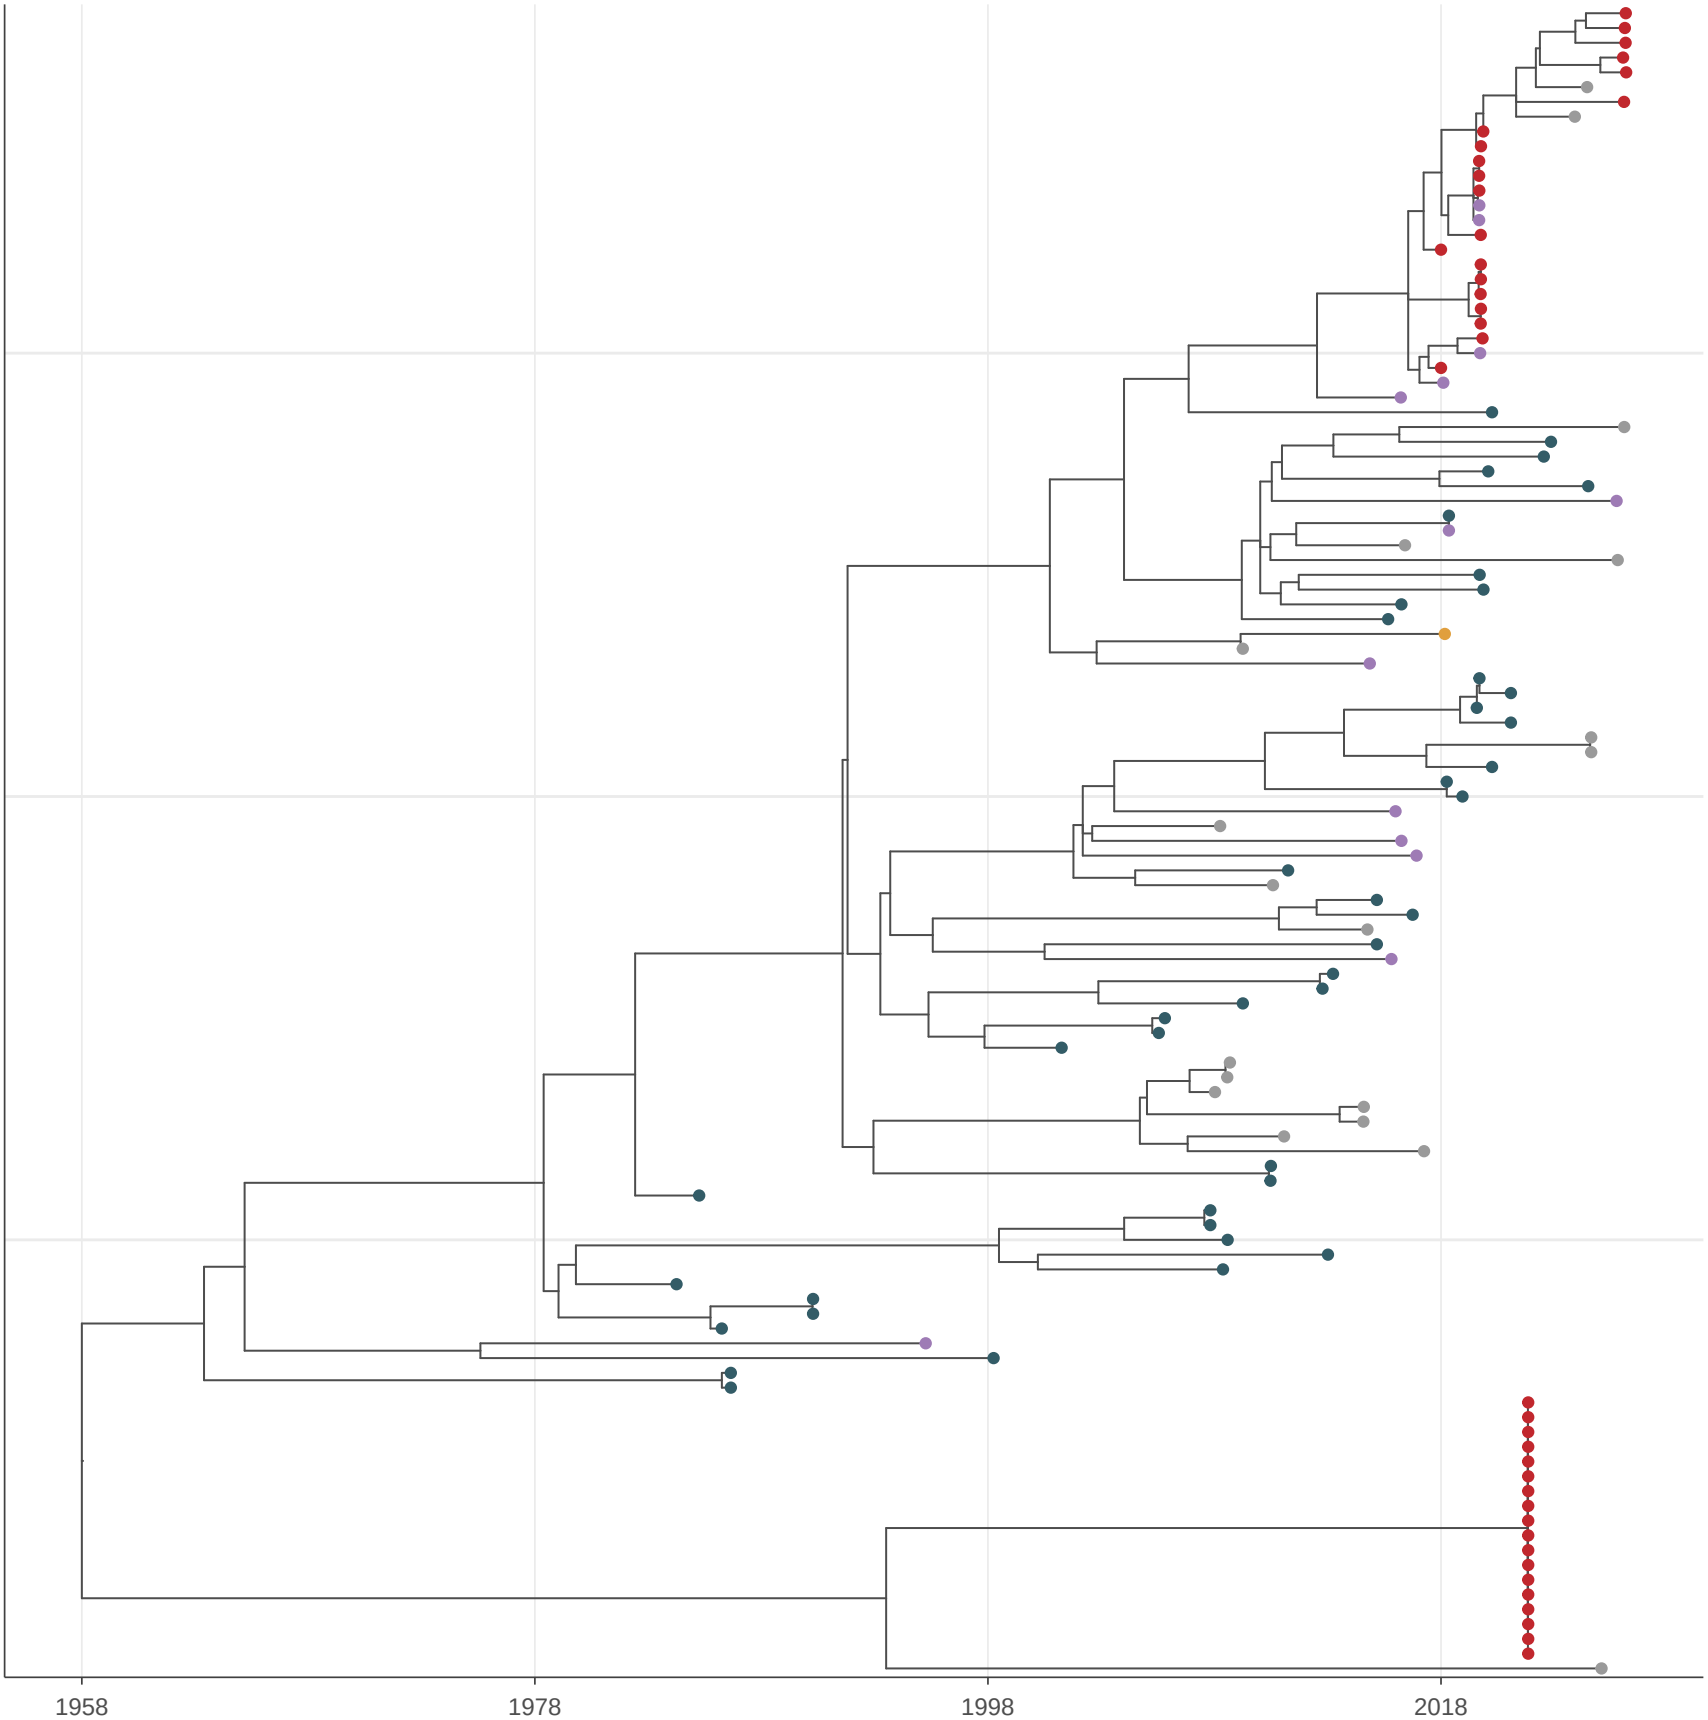
Time−scaled tree: one lineage, continuously present

Most recent common ancestor of the Bangladeshi 3I_A.2 sequences: 2016.3 (95% CI 2015.8−2016.8)



TreeTime 0.12.1, clock−rooted, −−covariation. Rate 6.81e−4 substitutions/site/year (+/−1.97e−5), R^2 0.94.
PQ815901.1 excluded as a probable recombinant or chimeric assembly. 7 clock−filtered tip(s) omitted: their inferred dates are not real. No Bangladeshi sequence is a clock outlier.
