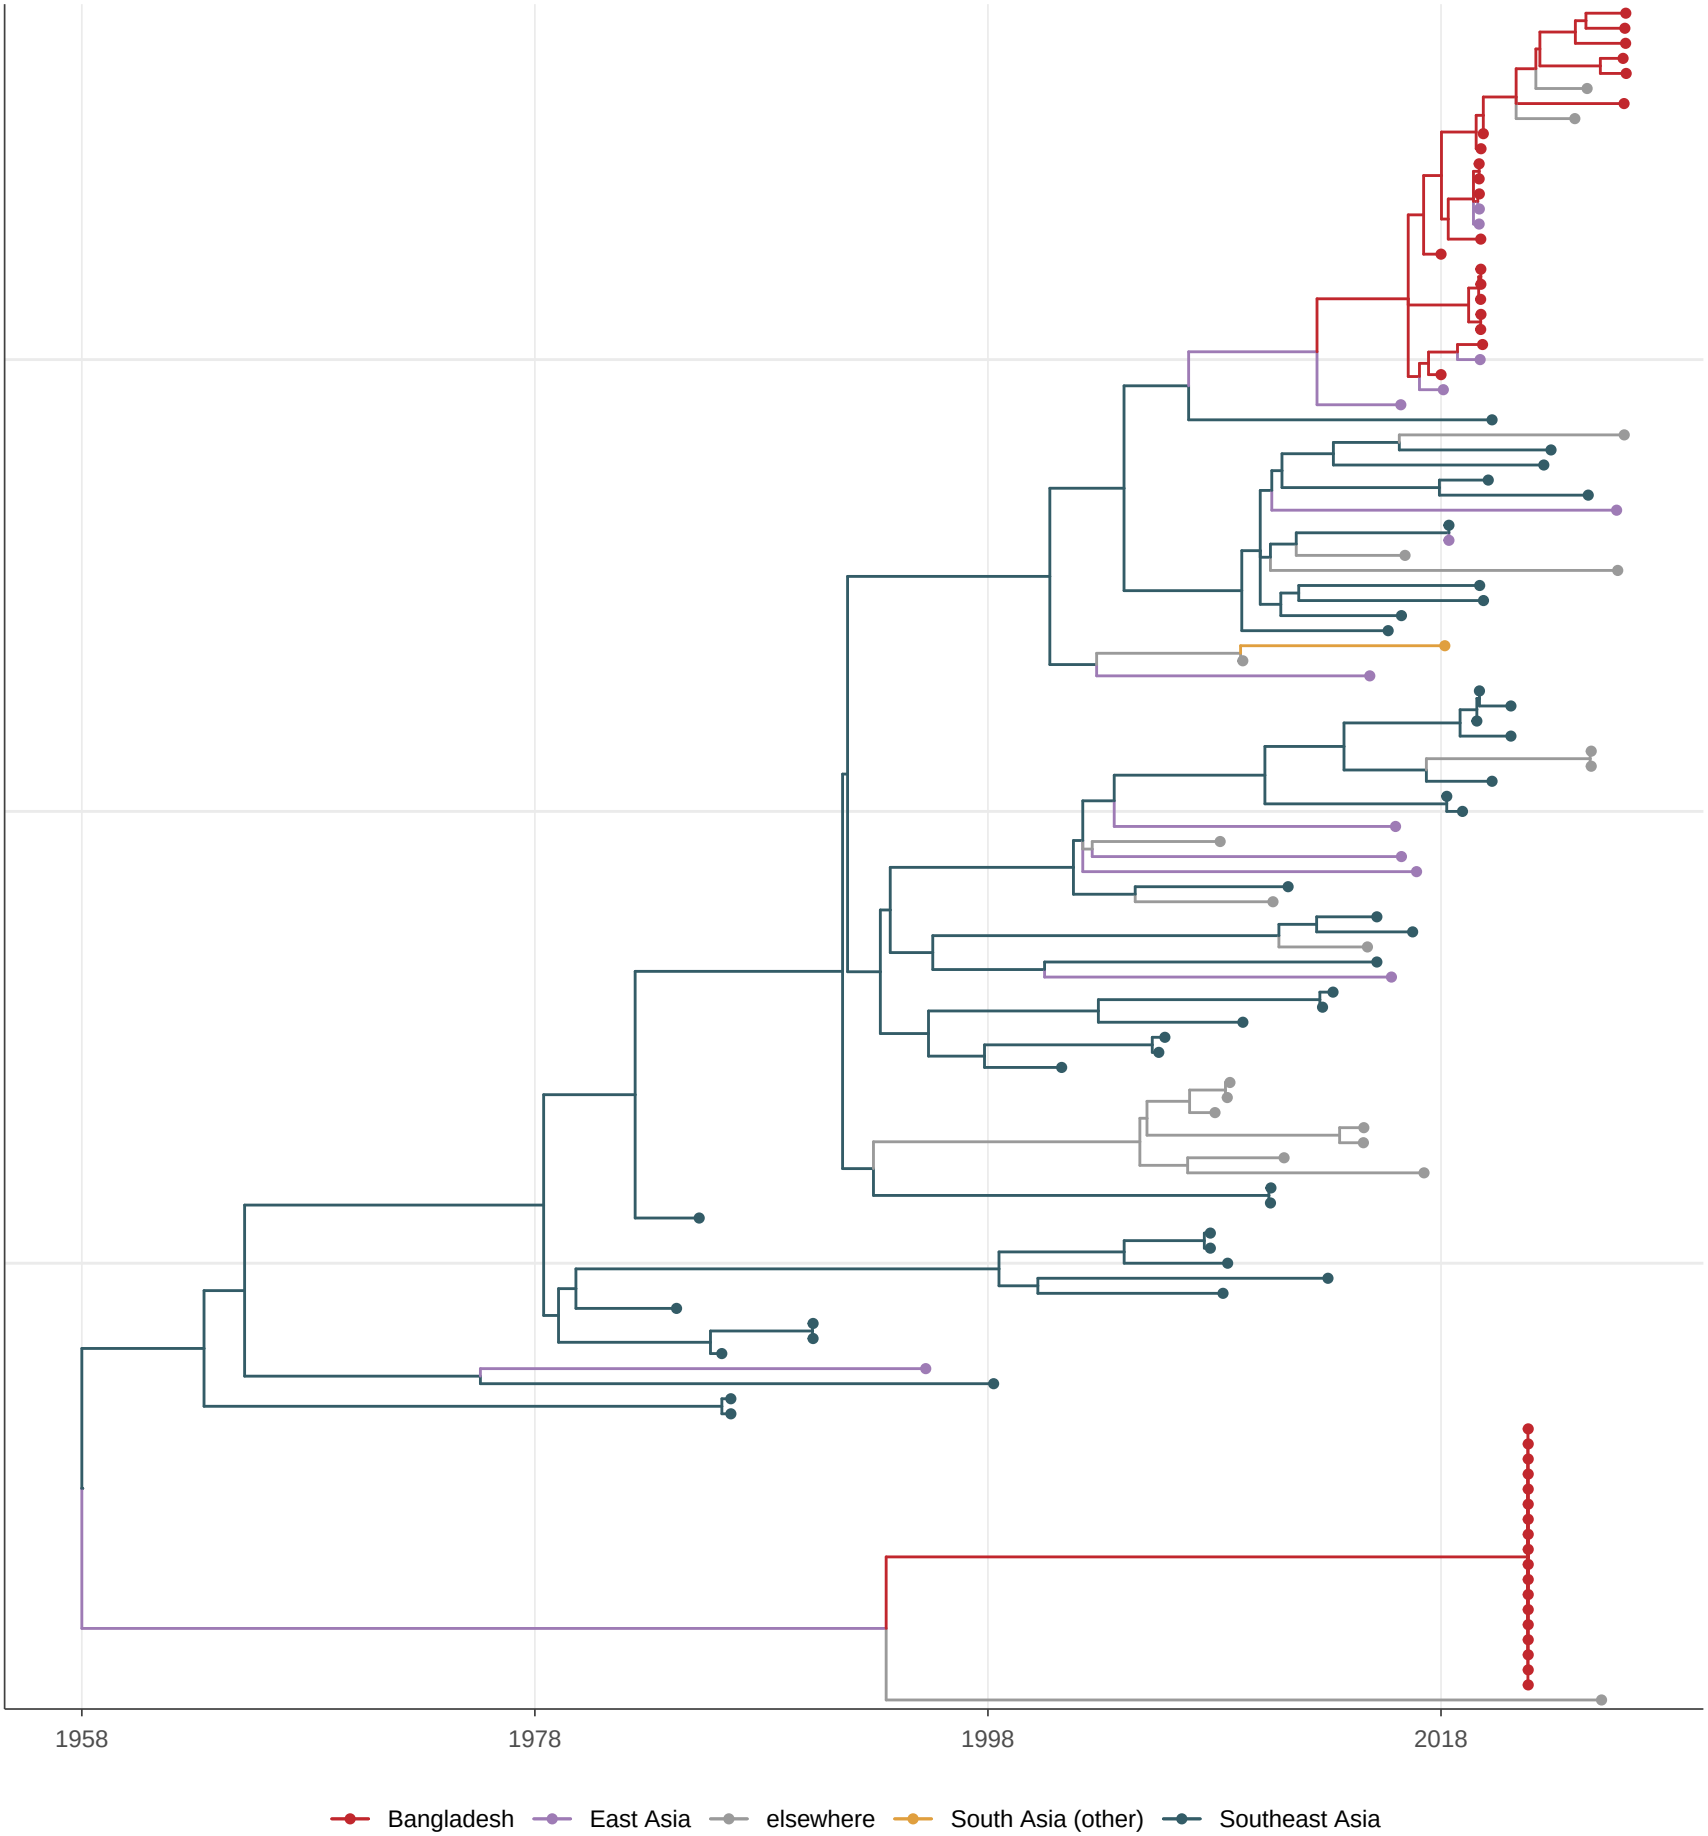
Inferred location along the tree: two introductions

Branch colour = region inferred by TreeTime mugration. One introduction carries every Bangladeshi 3I_A.2 sequence; a second is the 2021 3III_A detection.



The NUMBER of introductions is consistent between the whole−genome and E−gene datasets (two in both).
The geographic SOURCE is not: region−level inference gives East Asia from whole genomes and Southeast Asia from the E gene, so no source is claimed.
